Experience

Senior Data Scientist

12/2024 – Present

Meta

- Developed and deployed advanced optimizations to Meta's user language prediction model, increasing Ad availability and leading to a substantial increase of **\$195M in Annual Recurring Revenue (ARR)**.
- Engineered a high recall model (**95% recall**) to predict the resident state of users, ensuring Meta's adherence to global and state-level regulatory requirements.
- Performed large-scale data analysis to define new product opportunities and levers, driving adoption and integration of people data prediction models across various Meta products.
- Established and monitored key product metrics to measure the success of people data models, setting team goals and tracking major product trends.
- Worked closely with the engineering team to inform and influence the product strategy and executed product decisions by effectively communicating with multiple cross-functional partners.
- Working across areas of product operations, exploratory analysis, product leadership, and data infrastructure.

Data Scientist

12/2021 – 11/2024

Meta

- Led deep-dive analysis identifying and resolving latency and reliability bottlenecks in Meta's Shops Ads product, resulting in a **30-40% latency improvement** and generating **~1.2B ARR**.
- Performed large scale data analysis to discover and test new improvements to Shopping Cart product, providing insights and recommendations to drive the product roadmap.
- Developed metrics to translate the value of latency and reliability into revenue, helping the team accurately prioritize between feature development and better engineering projects.

Data Engineer

02/2020 – 11/2021

Meta

- Designed and implemented the entire data foundation and measurement system for Facebook Neighborhoods product from scratch, supporting product scaling from **0 to 10 million users**.
- Defined and operationalized key product metrics for areas like growth, retention, engagement, integrity which enabled the team to make critical business decisions and conduct rigorous experimentation.
- Performed deep-dive analysis and delivered key insights to drive the strategic direction and growth of Facebook Neighborhoods.
- Spearheaded new frameworks for the quick and efficient development of data architectures and measurement systems for **0 to 1** products.

Skills

Programming : **Python, SQL**

Libraries :Pandas, **Scikit-learn**, NumPy, Plotly

Frameworks : **PyTorch**, PySpark, Keras, XGBoost, Tensorflow,Transformers, LangChain

Tools : **AWS, Azure**, GCP, Git, **Airflow, dbt**, ML Flow, **Docker, DataBricks**, Kubernetes, Terraform, Spark, BigQuery, Snowflake, Airtable, Claude Code, Cursor

Domains : A/B Testing & Experimentation, ETL, **LLM, RAG, NLP, Machine Learning, AI agents**

BI & Analytics : **Tableau**, Power BI, Looker

Education

Master of Science, Computer Science, New York University

Bachelor of Engineering, Computer Engineering, University of Mumbai
